

THE REVIEW

Tom Balding West Texas Style Spur

Tom Balding of Sheridan, Wyoming, is proud to introduce his new line of West Texas Style spurs. This innovative design, born of 27 years of experience, is built with comfort and functionality in mind. The West Texas Style heelbands, made of brushed 1018 steel, are two ounces heavier than Tom's original heelband, and are available in one-inch mens' and ladies'. The heavier steel creates a difference you can see and feel. These spurs stay put on the heel, and with that peace of mind comes durability. Built to withstand years of use without compromise to fit or function. You can feel the difference.

Choose from any of Tom's popular shank and rowel options. Two new shank offerings, the #546 and #102, pair well with these new bands. Unique new rowel options are also available, all of which can be viewed online. Dress them up with your name, brand or logo; the possibilities are unlimited. Every piece is handcrafted, made to your specifications, with quality guaranteed.

Kerrits "Not So Tight" Denim Performance Tight

Riders now have the option of riding in jean tights instead of tight jeans! Kerrits new Denim Performance Tights and Bootcut offer riders the look of jeans without the restriction of traditional denim. These Tights and Bootcuts keep riders up to date with current fashion trends while maintaining comfort and flexibility in the saddle.

Kerrits has combined a technical hybrid of fabric, with the infusion of cotton for an authentic stretch denim look and feel. This fabric performs well and looks good at the same time; breathable, wickable and always machine washable. Both styles have traditional contrast stitching and eco-suede knee-patches with no inner leg seams and Kerrits signature flow rise waistband. The bootcut has contoured back pockets, placed to perform in the saddle yet flatter everywhere else.

Denim Performance Tights and Bootcut are available at authorized Kerrits dealers and online. For more information, go to www.kerrits.com or call 800-274-7946.

Whinny Warmers™

Raymond Petterson, president of Sox For Horses, Inc. and the inventor of Whinny Warmers®, never intended to make horse socks for a living. Necessity and an ex-Quarter Horse racing mare rescued from slaughter, named Evie, decided for him. In sub-freezing temperatures, the arthritis in her legs grew so painful the little mare would stop walking. Knowing that warmth could ease the pain of arthritis, he invented a pair of horse socks.

Evie's pullover socks seemed to make a difference: "She would wait by the barn each night for her socks. In no time, she was trotting and cantering around her pasture," says Petterson. Her farrier noticed. Her veterinarian noticed. They encouraged Petterson to make Evie's socks available to more horses suffering from arthritis, or conditions resulting in circulation impairment, such as insulin-resistant Cushings disease, laminitis and founder.

"I discovered why horse socks had not existed before. Horsehair is slippery! It took years to create a sock that stays in place, is warm enough to insulate the leg in extreme cold, is easy to get on and off, and functions as it should – safely on an equine leg."

Petterson's all-American made invention has evolved into the company's newest line, extreme temperature Whinny Warmers®.

A portion of each sale of Whinny Warmers® has gone to animal rescue efforts including ASPCA; Eyes of an Angel, U.S. Equine Rescue League, and Life Savers Wild Horse Rescue and many more. Learn more at www.whinnywarmers.com, email info@whinnywarmers.com, call 850-907-5724 or visit them on Facebook, at Sox for Horses!

Professional's Choice Retractable Cone

The standard safety cone just evolved! The Professional's Choice Retractable Cone is the most compact, easily stored safety tool you can have for your car, truck or trailer. Made of bright safety orange and reflective material for high visibility these cones offer a wide variety of uses. As well as being an excellent addition to your truck and trailer, the retractable cone can also be converted into a great training tool due to its adjustable nature. While the fully extended cone may be more appropriate for roadside situations requiring additional visibility, the cones can be shortened for arena use. Cones collapse flat for easy compact storage. Available in two sizes – Small 15" and Large 23".
